

Analysis Hotel Booking

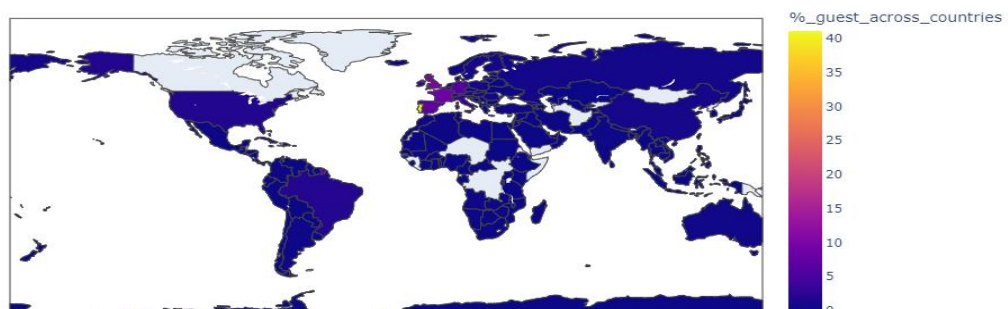

The goal of this project is to explore and analyze the data to better understand which factors are most important in driving revenue, and how those factors relate to hotel revenue.

To start exploring this goal, I used plotting a pie-chart to visualize the number of records by country. This analysis involves 3 parts:

1. Visualizing the number of bookings by country.
2. Visualizing the number of confirmed(non-cancelled) bookings by country.
3. Visualizing the number of cancelled bookings by country.

Total Bookings Across Countries

On the World Map, show the total number of bookings (both confirmed and canceled) across countries. These results will make it easier to comprehend and analyze the dataset, and selecting the best model for the dataset will help hotels and tourism businesses increase revenue.
